-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 15 June 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1, 3, 4, 6, 7, 14-16, 18, 19, 21-24, 26, 27 and 29-33 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 1, 3, 4, 6, 7, 14-16, 18, 19, 21-24, 26, 27, 29-33 is/are allowed.
- 6) ☒ Claim(s) 34-36 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED OFFICE ACTION

Faxing of Responses to Office Actions

In order to reduce pendency and avoid potential delays, TC 3700 is encouraging FAXing or responses to Office Actions directly into the Group at (571) 273-8300. This practice may be used for filing papers, which require a fee by applicants who authorize charges to a PTO deposit account. Please identify the examiner and art unit at the top of your cover sheet. Papers submitted via FAX into TC 3700 will be promptly forwarded to the examiner.

1. Claims 1, 16, and 24 have been amended for further examination. Claims 2, 5, 8-13, 17, 20, 25, 28 have been canceled. New claims 31-36 have been added.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

2. Claims 34 and 35 are finally rejected under 35 U.S.C. 103(a) as being unpatentable over Steidinger (6,533,325) in view of Charley (6,153,279).

Steidinger discloses in Fig. 3 and 4, a carrier sheet comprising a printed single paper sheet (111) having printed matter from a laser printer (Col. 1, lines 24-57 and Col. 5, lines 43-45), wherein the sheet has business indicia) and a contour on a front face (111a), wherein the printed matter contains card information printed (Col. 1, lines 50-55) in a card area (110) having a contour smaller than the contour of the paper sheet (Fig. 1); a polyfilm patch (112) adhered over the card area and over the card information; a thin flexible laminate patch (115) adhered (by adhesive, 116) on a rear surface (111b) of the card area and extending over the card area; wherein the flexible laminate patch (115) has contour smaller than the contour of the paper sheet and larger than the contour of the card area (as seen in Fig. 4); a die-cut (121 in Fig. 4) delineating the contour of the card area and extending depthwise through the polyfilm patch and paper sheet and only partly into the flexible laminate patch (115, as stated in Col. 8, lines 35-46); and a holding means or tabs (or ties as stated in Col. 11, lines 33-62) along the die-cut to hold the card area in the paper sheet; wherein the die cut extends only partly into the flexible laminate patch to define an uncut region (portion of laminate patch left uncut, Col. 8, lines 40-46).

However, Steidinger does not disclose wherein the flexible laminate patch is made of magnetic material and forms a magnet card.

Charley discloses in Fig. 1, a carrier sheet (S) comprising a printed paper sheet (14) having printed matter (Col. 2, lines 40-46) containing card information; a thin flexible laminate patch of magnet material (12) adhesively secured (acrylic adhesive) secured on a rear surface of

the paper sheet; wherein the combination of the card and magnet forms a magnet card which can be used for promotional purposes (Col. 1, lines 10-15).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Steidinger's carrier sheet with a paper sheet having a flexible laminate patch made of magnetic material as taught by Charley for the purpose removably attaching the card to an alternative surface.

3. Claim 36 is finally rejected under 35 U.S.C. 103(a) as being unpatentable over Steidinger in view of Charley, and further in view of Peterson (6,019,280).

Steidinger discloses in Fig. 3 and 4, a carrier sheet comprising a printed single paper sheet (111) having printed matter from a laser printer (Col. 1, lines 24-57 and Col. 5, lines 43-45), wherein the sheet has business indicia) and a contour on a front face (111a), wherein the printed matter contains card information printed (Col. 1, lines 50-55) in a card area (110) having a contour smaller than the contour of the paper sheet (Fig. 1); a polyfilm patch (112) adhered over the card area and over the card information; a thin flexible laminate patch (115) adhered (by adhesive, 116) on a rear surface (111b) of the card area and extending over the card area; wherein the flexible laminate patch (115) has contour smaller than the contour of the paper sheet and larger than the contour of the card area (as seen in Fig. 4); a die-cut (121 in Fig. 4) delineating the contour of the card area and extending depthwise through the polyfilm patch and paper sheet and only partly into the flexible laminate patch (115, as stated in Col. 8, lines 35-46); and a holding means or tabs (or ties as stated in Col. 11, lines 33-62) along the die-cut to hold the

card area in the paper sheet; wherein the die cut extends only partly into the flexible laminate patch to define an uncut region (portion of laminate patch left uncut, Col. 8, lines 40-46).

However, Steidinger does not disclose wherein the flexible laminate patch is made of magnetic material and forms a magnet card.

Charley discloses in Fig. 1, a carrier sheet (S) comprising a printed paper sheet (14) having printed matter (Col. 2, lines 40-46) containing card information; a thin flexible laminate patch of magnet material (12) adhesively secured (acrylic adhesive) secured on a rear surface of the paper sheet; wherein the combination of the card and magnet forms a magnet card which can be used for promotional purposes (Col. 1, lines 10-15).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Steidinger's carrier sheet with a paper sheet having a flexible laminate patch made of magnetic material as taught by Charley for the purpose removably attaching the card to an alternative surface.

However, Charley does not disclose a paper sheet that is machine foldable in panels.

Peterson discloses in Fig. 2-4, a paper sheet (10) having foldable panels to constitute a glue fold envelope mailer containing an outer address panel (19, shown in Fig. 5, and an inner printed message (36) containing the die-cut card (30).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Steidinger's and Charley's carrier sheet to include the die-cut card in an envelope mailer as taught by Peterson for the purpose of providing a mailer with a die-cut card to be used as a return postcard.

Allowable Subject Matter

4. Claims 1-7, 14-16, 18, 19, 21-24, 26, 27, 29-33 are allowed.

Response to Arguments

5. Applicant's arguments with respect to claims 34-36 have been considered but are moot in view of the new ground(s) of rejection.

In regards to applicant's arguments that the prior art does not teach: wherein the flexible laminate patch is made of magnet material and is only partly cut depthwise, the examiner submits that the Steidinger reference is now used to disclose a flexible laminate patch located on a rear surface of the card area, wherein the laminate patch is only cut partly depthwise. The Charley reference has been cited for only disclosing that a flexible laminate patch can be made of a magnetic material. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Steidinger's carrier sheet with a paper sheet having a flexible laminate patch made of magnetic material as taught by Charley for the purpose removably attaching the card to an alternative surface.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark T. Henderson whose telephone number is (571) 272-4477, and informal fax number is (571) 273-4477. The examiner can be reached on Monday-Friday from 9:00AM to 3:45PM. If attempts to reach the examiner by telephone are unsuccessful, the Examiner Supervisor, Boyer Ashley, can be reached at (571) 272-4502. The formal fax number for TC 3700 is (571) 273-8300.
